

Turn your endoscopy facility into a more efficient environment while providing your patients with pathology expertise with EndoKey from DIANON Systems.

With EndoKey, the tools you need to achieve end-to-end connectivity between your practice management software (PMS), procedure-writing software (PWS), and DIANON are now available. You already know you can rely on DIANON for expert pathology services. Now you can rely on us for a connectivity solution that will help streamline your office workflow.

Practice Management Software

Interfacing your practice management and procedure-writing software means patient demographics do not need to be entered separately. Using DIANON's ADT-Lite™ interface eliminates double entry of patient data, often faster and at less cost than a standard Admission Discharge Transfer (ADT).

EndoKey

Connectivity between your PWS and DIANON's EndoKey eliminates manual transcription of physician notes and patient data or copying of insurance cards.

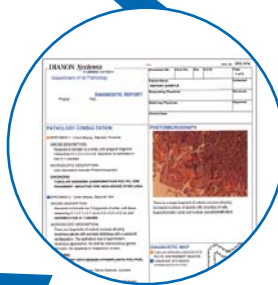

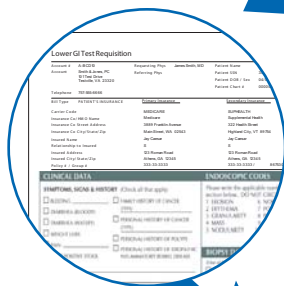

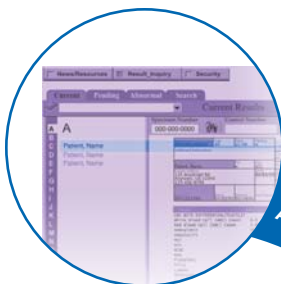

EndoKey will populate DIANON pathology test request forms with ICD-9 codes and patient demographic

data, including insurance information, from your PWS.* Test request forms and labels are automatically populated with the clinical information gathered during the case and print complete with patient demographics and specimen data.

DIANON Systems Pathology

Pathology results and CarePath™ Patient Counseling Reports from DIANON Systems will

be securely delivered to your PWS and electronic medical record (EMR), eliminating the need to scan and file pathology reports.

ADT demographics information

* Not all procedure-writing software programs are able to incorporate ICD-9 codes and insurance data at this time. Check with your software manufacturer.

DIANON Systems now has the ability to make this happen—fast.

DIANON understands your business needs. We know that software alone will not eliminate errors or improve workflow efficiencies, yet EndoKey will make it possible to integrate workflow components seamlessly and have your office operating at peak efficiency.

More time for patients

EndoKey from DIANON helps you and your office staff spend less time filling out paperwork and more time doing what matters most—providing care to your patients.

Maximize your existing software

Whether you have already invested in procedure-writing software or are considering such a purchase, EndoKey will allow you to make the most of your technology investment.

Increase efficiency and reduce errors

EndoKey eliminates manual transcription of pathology test request forms, test slips, jars, and billing forms, thus minimizing the opportunity for transcription errors, improving patient safety, and enhancing workflow efficiencies.

Unique pathology platform

With EndoKey, pathology test request forms are automatically coded for DIANON.

From start to finish, DIANON will handle the entire EndoKey installation and training process.

Implementing EndoKey is easy and handled entirely by DIANON technical support staff.

To learn more about how EndoKey can work for your endoscopy facility, contact your DIANON representative today at 800-328-2666.
